March 1970

FOREWORD

The Act establishing the Canada Pension Plan required that collection of contributions under that plan and the Quebec Pension Plan commence in January 1966. This publication presents a new source of statistical data showing social and economic characteristics of all persons who filed income tax returns, identifying them according to their status as contributors or non-contributors.

It was realized that the feedback of statistical data from the Canada Pension Plan would not only be a valuable source of information for the administration of the program but it would be a new and valuable source of data for social and economic research. Consequently, in 1965 a committee set up to develop statistics for the Canada Pension Plan recommended the preparation of four analytical tabulations of total income as declared on the T-1 Income Tax Returns.

The Department of National Health and Welfare then arranged with the Department of National Revenue for the collection and production of statistics on contributors to the Canada and Quebec Pension Plans as well as on non-contributors. Early in 1968 that Department provided four tabulations of data on the socio-economic characteristics of such persons who filed Income Tax returns for 1966. These tabulations are of particular interest to those responsible for the administration of the Pension Plans because they provide data on contributors and non-contributors on the basis of such characteristics as age, sex, marital status, employment status, income level, principal source of income, occupational class and geographic area. In addition, these data are of value to government agencies, welfare agencies, and organizations and persons interested in socio-economic research and are of particular use to this Directorate in its research studies.

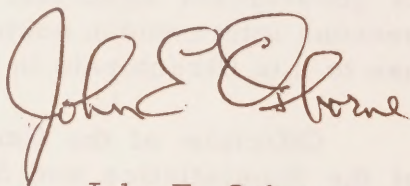

Officials of the Canada Pension Plan together with officials of the Biostatistics and Social Security Research Divisions of the Research and Statistics Directorate planned the content of this bulletin. Some of the forty-five tables contained herein present data in the form of extracts or summaries from the original four tabulations, while others show median incomes for selected groups of contributors and non-contributors. Details regarding the content of the four original tabulations and the forty-five tables in this bulletin are given in a short introduction, and there is a section explaining concepts and defining terms appearing in the data.

I hope that these data will prove to be a useful addition to the growing body of socio-economic statistics, and that they will be helpful in the many areas of social welfare administration and research. Comments are requested from persons using the data in this bulletin as to their usefulness and as to the type of information they would find valuable in their activities. Such comments would help to ensure the provision of data to meet actual needs.

Appreciation is hereby expressed to the staff of the Planning and Development Branch and the Computer Systems Analysts of the Department of National Revenue for their full co-operation in the production of the source data. Not only did they undertake to program and print the basic tabulations, but they also co-operated in editing the data in terms of the needs of the Canada Pension Plan. The guidance and co-operation given by officials of the Canada Pension Plan are gratefully acknowledged. The co-operation of the officials of la Régie des rentes du Québec, who made it possible to obtain uniform tabulations combining the data on contributors to the Canada and Quebec Pension Plans, is acknowledged and sincere thanks are extended to them.

Other reports and research memos are planned for publication in the near future which will present and compare these data as well as report on analytical studies using them.

Dr. Velma I. Rust prepared the bulletin under the general direction of Mr. C.B. Walker, Principal Research Officer, Biostatistics Division and Mr. J.I. Clark, Principal Research Officer, Social Security Research Division.

A handwritten signature in dark ink, reading "John E. Osborne". The signature is fluid and cursive, with the first name "John" and last name "Osborne" clearly legible.

CONCEPTS AND EXPLANATIONS OF TERMS

1. Contributor - To participate in the Canada Pension Plan (CPP) or the Quebec Pension Plan (le Régime de rentes du Québec, RRQ) as a contributor, a person must be between the ages of 18 and 70 and earn more than \$600 yearly as an employee, or at least \$800 as a person with earnings from self-employment. In 1966 the year for which these data were collected, contributions were made on earnings between \$600 and \$5,000 a year in the case of both employees and self-employed persons.
2. Non-Contributor - A non-contributor is a person who could not participate in the Plan either because he was under the age of 18 or was 70 years or over, or whose age fell within these limits but whose annual earnings were less than \$601 as an employee or \$800 as a person with earnings from self-employment, or whose employment was excepted from pensionable employment under the Plan. This bulletin presents data relating only to non-contributors who filed income tax returns, and does not report on non-contributors not obliged to file returns either by the Income Tax Act or by the Canada Pension Plan. This is true also of the group of contributors.
3. Earnings - The Canada and Quebec Pension Plans are earnings-related Plans where earnings mean income from pensionable employment or self-employed earnings and do not include income not directly related to employment such as investment income or pensions.
4. Income - Income as presented in these tables is income computed in accordance with the Income Tax Act. This concept is less comprehensive than income as defined for census purposes, but more comprehensive than the earnings concept used under the Canada and Quebec Pension Plans.

Income, therefore, includes such items as: total earnings as an employee before deductions (as shown on T-4 slips), tips and gratuities, superannuation or pension, Old Age Security Pension and Supplement and Canada or Quebec Pension Plan benefits, net income from rent, business, farming or fishing, net professional income or commissions, net dividends from taxable Canadian corporations, interest on bank accounts, bonds, mortgage or other investment, dividends from other than taxable Canadian corporations, royalties, the taxable portion of annuity payments, alimony or separation allowance, amounts received under a supplementary unemployment benefit plan (a guaranteed annual wage plan) and that portion of amounts allocated

under an employees' profit-sharing plan, income from an estate that is designated as 'other income', and income from property transferred to a wife (or husband) or to a person who has not yet attained the age of 19 years (such as interest, dividends, rentals, and royalties);

but does not include sources of income such as the following: Family Allowances, Youth Allowances, Unemployment Insurance benefits, Workmen's Compensation payments, War Disability pensions, and social assistance payments.

5. Principal Source of Income - A person's principal source of income is his largest source of gross income. On this basis he is placed in whichever of the categories is appropriate:
- (a) The professional category includes persons whose principal source of income is the practice of a profession.
 - (b) The business enterprise category includes individuals whose principal source of income is a business.
 - (c) The employment category includes all persons filing T-1 Short Returns showing that 50% or more of their total income is from employment earnings and those filing certain T-1 General Returns similar to T-1 Short Returns but containing foreign tax credits or other special claims.
 - (d) The farming and fishing category includes persons whose principal source of income is farming or fishing.
 - (e) The salesmen category includes individuals whose principal source of income is selling on a commission basis.
 - (f) The investment category includes those whose principal source of income is investment, pensions or rental income. The term investment as used here includes such types of income as bond, bank and mortgage interest, dividends, the taxable portion of annuities, and income from estates and trusts. This category includes persons filing T-1 Short Returns showing that less than 50% of their total income is from employment earnings.
6. Employment Status - A person is classified as "employee", "self-employed", or "mixed", depending upon whether he has earnings from employment, from self-employment, or from both employment and self-employment.

7. Occupational Class - Occupational class has been explained in "Taxation Statistics"(1) as follows:

"This classification is based in the main on the taxpayers' method of earning income rather than strictly on the type of work performed. This procedure has been followed because the source of income has been found to be a systematic and uniform method of classification, whereas the descriptions supplied by many individuals are not uniform. As a result, the number of doctors, lawyers, etc. shown here is likely to be less than the number shown in professional directories.

- (a) The classification 'Other professionals' includes nurses, osteopaths, chiropractors, surveyors, veterinarians, tax consultants, investment counsellors.
- (b) Professionals earning the major part of their income in the form of salary are classified as employees.
- (c) The large employee class has been subdivided according to whether the taxpayer is employed by a business, an institution or a school, or some form of government body.
- (d) Employees of individuals or farmers and other employees who cannot be included elsewhere are shown as 'unclassified employees'.
- (e) Employees of Crown Corporations are shown as employees of businesses rather than as government employees.
- (f) The classification 'Teachers and professors' excludes non-teaching employees of schools and colleges.
- (g) Business proprietors or partners, with or without employees, are subdivided according to the type of business.
- (h) A proprietor who conducts two different types of business is classified to the type which has the larger gross.
- (i) Individuals who derive the bulk of their income from the rental of real estate are shown as 'property owners'."(1)

(1) Taxation Statistics, 1968 Edition, Department of National Revenue, Taxation, Ottawa, Canada, p. 36.

8. Marital Status -

- (a) The Married category covers all persons with a spouse, that is, those who have declared themselves married in their Income Tax returns.
- (b) The Single category covers persons who have never been married and those who have been widowed, divorced or separated as well as those whose marital status is not known.

9. Geographic Area of Residence - A geographic area represents a county or census division or a locality as defined by the Locality Code used by the Department of National Revenue as adapted from the Standard Geographical Classification of the Dominion Bureau of Statistics.

- (a) Census Metropolitan Area - A metropolitan area, as defined in the census, relates to a group of predominantly urban communities which are in close economic, geographic and social relationship. Thus, nineteen large cities are Census Metropolitan Areas. In 1966 each of these had a population of over 100,000. Some metropolitan areas have been subdivided, for instance, Halifax and Dartmouth, Ottawa and Hull, and Vancouver and New Westminster.
- (b) Locality - A locality may be a city, town, village or rural municipality.

10. T-1 General Returns - These are returns filed by persons

- (a) in business as proprietors or partners, including farmers and fishermen,
- (b) receiving professional fees, commissions or rents,
- (c) with investment income over \$2,500,
- (d) claiming foreign tax credits or capital cost allowance, or
- (e) making additional Canada Pension Plan contributions on certain types of employment income.

Other individuals file T-1 Short Returns.

11. Age, Sex, Marital Status Unspecified - A number of returns were received which lacked information as to age, as to sex, or as to marital status, and these data have been included in this Bulletin and appropriately designated.

INTRODUCTION

As mentioned in the Foreword, the socio-economic data on contributors to the Canada and Quebec Pension Plans were collected and produced by the Department of National Revenue. This means that they cover only those persons who filed Income Tax returns for the year 1966, whether or not they were contributors to the plan.

The data contained in the four basic tabulations produced by the Department of National Revenue are illustrated by Tables 1 to 45 in this bulletin. A general description of the nature of the data contained in each of the tabulations is set out below.

- (1) The first tabulation provides data on all individuals who filed income tax returns with the Government of Canada classified by contributory status under the CPP and/or RRQ, showing marital status, age, sex and level of income for 1966. These data are illustrated by Tables 1 to 21.
- (2) The second tabulation shows the distribution of all individuals who filed income tax returns with the Government of Canada classified by principal source of income, showing amount of income, age, sex and contributory status under the CPP and/or RRQ for 1966. These data are illustrated by Tables 22 to 30.
- (3) The third tabulation covers all individuals who filed income tax returns with the Government of Canada by geographic area of residence, showing contributory status under the CPP and/or RRQ, employment status, sex and amount of income for 1966. These data are illustrated by Tables 31 to 36.
- (4) The fourth tabulation covers all individuals who filed income tax returns with the Government of Canada classified by occupational class, showing contributory status under the CPP and/or RRQ, sex, and amount of income for 1966. These data are illustrated by Tables 37 to 45.

The first three tabulations were produced from the total tax file, that is, from data for the total population of persons filing income tax returns with the Government of

Canada in 1966. The fourth tabulation, however, is based on the sample (2) of this population used by the Department of National Revenue to develop the "Taxation Statistics" which they publish annually. The first three tabulations were found to underestimate the number of contributors because 75,000 self-employed contributors in the Province of Quebec were classed as non-contributors in the tabulations for Canada and the Province of Quebec. A source of error leading to an overestimate of the number of contributors derives from the fact that certain persons eligible for refund under the Canada Pension Plan failed to claim these refunds and hence appear in these tabulations as contributors. This error applies to all provinces and the groups affected would be persons shown as contributors under age 18, certain of the contributors with low levels of income (since the income in these data is income for Income Tax purposes but the Canada Pension Plan relates to income from employment earnings), and some of the contributors age 70 and over.

Tables 1 to 21 - In Tables 1, 2 and 3 the numbers of contributors to the CPP and/or RRQ and non-contributors filing Income Tax returns in each province in 1966 are compared by sex with the corresponding census population data. The next nine tables, tables 4 to 12, provide age distributions of contributors and non-contributors for each province by sex and marital status. Tables 13 to 15 show income distributions for male and female contributors and non-contributors for each province. The next six tables provide information on median incomes. Tables 16 to 18 compare median incomes by province and for Canada by sex and marital status, while Tables 19 to 21 give data for Canada by age, sex and marital status.

Tables 22 to 30 - Tables 22 to 27 provide data for each province and for Canada on the principal source of income of male and female contributors and non-contributors. The first three tables give numbers and the last three provide median incomes. Tables 28 to 30 show median incomes of contributors and non-contributors for Canada by age group and for each principal source of income.

(2) The sample is described in Taxation Statistics, 1968 Edition, Department of National Revenue, Taxation, Ottawa, Canada, p. 145.

Tables 31 to 36 - In these six tables income distributions are shown for male and female contributors and non-contributors for 19 Census Metropolitan Areas of Canada. Although the Department of National Revenue also produced detailed breakdowns for each of the Counties and census subdivisions listed in the appendix, space in this bulletin did not permit reproduction of these data here. Tables 31 to 33 show distributions by sex and income level, whereas the next three tables give distributions by sex and employment status, that is, show whether the person has earnings from employment, self-employment or from both.

Tables 37 to 45 - The last nine tables give information regarding the occupational class of contributors and non-contributors who filed Income Tax returns in 1966. Tables 37 to 39 give a breakdown by sex, Tables 40 to 42 give a breakdown by province and for Canada, while Tables 43 to 45 give a breakdown by income range.

As mentioned, this bulletin presents a new source of socio-economic statistics, as well as data of direct use to officials of the Canada and Quebec Pension Plans. While these data are not examined in depth or highlighted in this publication, further research publications are planned in continuing consultation with the Canada Pension Plan.

The Department would appreciate receiving an expression of interest in any or all of the tables contained in this bulletin.

(1) The Total Tax File was edited using the Statistical Sample Tape to obtain the proportions of contributors and non-contributors in the Province of Quebec (and Canada) for each income, sex and marital status group, and the adjusted distributions were used to obtain these median incomes.

(2) Includes the Yukon and the Northwest Territories.

(3) The single category covers persons who have never been married and those who have been widowed, divorced or separated as well as those whose marital status is not known.

(4) Includes persons for whom sex is not stated.

TABLE 17: MEDIAN INCOME OF PERSONS FILING INCOME TAX RETURNS FOR 1966 WHO WERE NOT CONTRIBUTORS TO THE CPP/RRO, BY SEX, MARITAL STATUS AND PROVINCE

Sex - Marital Status	MEDIAN INCOME										
	Newfound- land	Prince Edward Island	Nova Scotia	New Brunswick	(1) Quebec	Ontario	Manitoba	Saskatch- ewan	Alberta	British Columbia	(1) (2) Canada
MALES	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$
Married	2,824	1,743	2,167	2,324	2,459	2,513	2,093	2,159	1,781	2,536	2,396
Single (3)	745	1,237	1,085	946	1,228	1,534	1,263	1,368	1,152	1,703	1,393
All males	1,663	1,474	1,627	1,651	1,816	2,024	1,686	1,755	1,462	2,160	1,890
FEMALES											
Married	499	564	507	486	598	662	534	557	575	923	602
Single (3)	727	1,962	1,687	1,499	1,356	1,821	1,592	1,741	1,505	1,883	1,622
All females	616	1,399	1,164	973	1,139	1,438	1,192	1,334	1,135	1,535	1,302
BOTH SEXES (4)											
Married	2,243	1,525	1,661	1,732	1,897	1,913	1,653	1,804	422	2,139	1,889
Single (3)	737	1,504	1,330	1,176	1,299	1,668	1,409	1,504	1,296	1,774	1,501

(1) The Total Tax File was edited using the Statistical Sample Tape to obtain the proportions of contributors and non-contributors in the Province of Quebec (and Canada) for each income, sex and marital status group, and the adjusted distributions were used to obtain these median incomes.

(2) Includes the Yukon and the Northwest Territories.

(3) The single category covers persons who have never been married and those who have been widowed, divorced or separated as well as those whose marital status is not known.

(4) Includes persons for whom sex is not stated.

TABLE 18: MEDIAN INCOME OF ALL PERSONS FILING INCOME TAX RETURNS
FOR 1966 BY SEX, MARITAL STATUS AND PROVINCE

Sex - Marital Status	MEDIAN INCOME

(1) Where no median income is given, the median could not be calculated because of extremely small frequencies, combined with "zeroing out" of values less than 3, or because the majority of persons had incomes in the one extreme interval, namely \$10,000 and over, or as in footnote (2).

(2) Data not available for contributors alone, by principal source of income.

(3) The Total Tax File was edited using the Statistical Sample Tape to obtain the proportions of contributors and non-contributors in the Province of Quebec (and Canada) for each sex and income group, and the adjusted distributions were used to obtain these median incomes.
